## EDUCATION

**Quinnipiac University | Hamden, CT**

**Computer Science, B.S.** **Graduated May 2026**

**Cybersecurity, M.S.** **Expected May 2027**

- **Relevant Coursework:** Data Structures & Abstraction, Advanced Algorithms & Design, Operating Systems & System Programming, Network & Distributed Systems, Database Systems, User Interface Design, Intro to Cybersecurity, Cryptography
- **Leadership Roles:** Computing Club, Poker & Strategy, MOVE, Game Developers Club, Interfraternity Council, Alpha Sigma Phi

## SKILLS

**Programming Languages:** Python, Java, C++, JavaScript, SQL, HTML, CSS

**Frameworks / Technologies:** React, Flask, SQLite, MySQL, DuckDB, PostgreSQL, AWS, Git, Arduino, Figma, REST APIs

**Languages:** English and Spanish (native/bilingual)

## SOFTWARE DEVELOPMENT PROJECTS

**AI-DJ | Real-time Audio Controller | Team-based** **Aug 2025 - May 2026**

*Python • React • JavaScript • DuckDB • Ollama*

- Developed a web-based AI DJ assistant that helps users create smoother playlist transitions by combining real-time audio playback controls with AI-powered playlist and transition suggestions.
- Supported AI-driven transition and segmentation workflows using audio features such as BPM, energy, and key to help rank smoother song transitions and improve automated queueing.

**FitAI | AI Fitness Dashboard | Hackathon Project** **November 2025**

*Python • Flask • JavaScript • HTML/CSS • SQLite • Spoonacular API*

- Won 3rd Place Overall and the UNAPEN Attractive Design award by building a full-stack Flask/JavaScript dashboard for calorie, macro, nutrition, and gym-progress tracking.
- Developed backend logic with Python, Flask, and SQLite to store user input, calculate personalized fitness targets, and support live progress tracking across the dashboard.
- Integrated the Spoonacular API to prototype image-based meal logging, allowing users to estimate calories and macros from uploaded food photos.

**Trivia Game | Client-Server Application | Team-based** **Jan 2025 - May 2025**

*Java • TCP/IP*

- Built a Java client-server trivia game that allowed multiple players on the same Wi-Fi network to receive questions, submit answers, and track scores in real time.
- Improved reliability during repeated play sessions by debugging network edge cases around disconnects, answer timing, and score synchronization.

**Dream Quest | 2D RPG | Team-based** **Aug 2024 - Dec 2024**

*Java • Git • Agile*

- Shipped a playable Java 2D RPG prototype by building quest, combat, weapon, spell, map-navigation, and UI-flow systems through story-based gameplay with three classmates.
- Improved team delivery by using GitHub branches, pull requests, user stories, and sprint planning to release small playable updates throughout the semester.

## EXPERIENCE

**Founder & Engineer | SaloStack | Remote** **May 2026 – Present**

*React • HTML/CSS • Git • Figma*

- Founded a freelance software development team building client websites, web app demos, and practical software solutions for small businesses.
- Led client communication by gathering requirements, presenting demos, explaining planned features, collecting feedback, and translating revisions into clear development tasks.

**OGiQ Summer Analyst | Options Group | New York, NY** **June 2025 - Aug 2025**

*Executive Search*

- Supported tech-focused executive searches by analyzing talent pools, skill requirements, and market trends to understand how financial institutions evaluate engineering and technology candidates.
- Conducted research across capital markets, hedge funds, and wealth management to support data-driven search strategies and improve internal decision-making.

**Undergraduate Research Assistant | Quinnipiac Department of Psychology** **Nov 2024 - Jan 2025**

*C++ • Arduino*

- Programmed and debugged C++ on Arduino to automate extend/retract timing for a 12V linear actuator used in behavioral neuroscience research.
- Restored a legacy actuator system by interpreting wiring diagrams, rewiring Arduino and relay modules, and testing repeated trials to ensure consistent actuator performance.
